

Arthropods

Arthropods account for more than 65% of global species and 85% of animal species. On a temperate grassland, arthropods hold a huge biomass (1,000kg/ha), seconded to plant (20,000kg/ha) and microorganisms (7,000kg/ha) but much higher than mammals (1.2kg/ha), birds (0.3kg/ha), and nematodes (120kg/ha). Arthropods play the role of both pests and beneficial organisms. Some arthropods are important crop pests but others are natural enemies. Some arthropods are important health pests but many crustaceans are important food sources of humankind. Arthropods govern the structures and functions of natural ecosystems, but are always ignored by researchers. On the global scale, the surveys of mammals, birds and vascular plants were relatively perfect because they were economically important and easily surveyed. However, arthropods, despite their ecological and economical importance, have not yet been surveyed and recorded due to their difficulties to be sampled. The research on arthropod diversity must be further promoted. The journal, *Arthropods*, is inaugurated to provide a public and appropriate platform for the publication of studies and reports on arthropod diversity.

ARTHROPODS (ISSN 2224-4255) is an international journal devoted to the publication of articles on various aspects of arthropods, e.g., ecology, biogeography, systematics, biodiversity (species diversity, genetic diversity, et al.), conservation, control, etc. The journal provides a forum for examining the importance of arthropods in biosphere (both terrestrial and marine ecosystems) and human life in such fields as agriculture, forestry, fishery, environmental management and human health. The scope of *Arthropods* is wide and embraces all arthropods-insects, arachnids, crustaceans, centipedes, millipedes, and other arthropods. Articles/short communications on new taxa (species, genus, families, orders, etc.) and new records of arthropods are particularly welcome.

Authors can submit their works to the email box of this journal, arthropods@iaees.org. All manuscripts submitted to *Arthropods* must be previously unpublished and may not be considered for publication elsewhere at any time during review period of this journal.

In addition to free submissions from authors around the world, special issues are also accepted. The organizer of a special issue can collect submissions (yielded from a research project, a research group, etc.) on a specific topic, or submissions of a conference for publication of special issue.

Editorial Office: arthropods@iaees.org

Publisher: International Academy of Ecology and Environmental Sciences

Address: Flat C, 23/F, Lucky Plaza, 315-321 Lockhart Road, Wanchai, Hong Kong

Arthropods

ISSN 2224-4255

Volume 1, Number 3, 5 September 2012

Articles

Reviewing the structure and function of the scorpion's hepatopancreas

M.R. Warburg 79-93

Effect of male densities on sex ratio variations of the predatory gall midge, *Aphidoletes aphidimyza* (Diptera: Cecidomyiidae)

Seyed Mohammad Tabadkani, Hossein Allahyari, Farhad Farhoudi, et al. 94-100

Pictorial keys for predominant *Bactrocera* and *Dacus* fruit flies (Diptera: Tephritidae) of north western Himalaya

C. S. Prabhakar, Pankaj Sood, P. K. Mehta 101-111

Checklist of butterfly fauna of Kohat, Khyber Pakhtunkhwa, Pakistan

Farzana Perveen, Ayaz Ahmad 112-117

Short Communication

Checklist of the freshwater decapod crustaceans from the Orontes River

Tahir Özcan, Gülnaz Özcan, Halil Erdoğan 118-120

The International Academy of Ecology and Environmental Sciences (IAEES) is a nonprofit and registered international organization. It devotes to promote global ecology and environmental sciences and protect global ecological environments, by publishing scientific publications, conducting research activities, launching environmental programs, disseminating knowledge and technologies, sponsoring conferences, and providing information and discussion spaces, etc. The responsibility for these publications rests with the International Academy of Ecology and Environmental Sciences.
