

## **Computational Ecology and Software**

The Computational Ecology and Software (CES) is an open access (BOAI definition), peer/open reviewed online journal that considers scientific articles in all different areas of computational ecology. It is the transactions of the International Society of Computational Ecology. The journal aims to disseminate ecological researches, constructions and applications of theories and methods of computational sciences including computational mathematics, computational statistics and computer science. It focuses on modeling, simulation, approximation, prediction, recognition, and classification of ecological issues. The topics to be covered by CES include, but are not limited to:

- Computation intensive methods, numerical and optimization methods, differential and difference equation modeling and simulation, mathematical models and algorithms, prediction, recognition, classification, statistical computation (Bayesian computing, randomization, bootstrapping, Monte Carlo techniques, stochastic process, etc.), agent-based modeling, individual-based modeling, artificial neural networks, knowledge based systems, machine learning, genetic algorithms, data exploration, network analysis and computation, databases, ecological modeling and computation using Geographical Information Systems, satellite imagery, and other computation intensive theories and methods, etc.
- Artificial ecosystems, artificial life, complexity of ecosystems and virtual reality.
- The development, evaluation and validation of software and algorithms for computational ecology. The development and evaluation of apparatus, instruments and machines for ecological and environmental analysis, investigation and monitoring based on the software of computational ecology.
- Methodological applications of computational ecology in the researches of ecology and environmental sciences.

Authors can submit their works to the email box of this journal, [ces@iaees.org](mailto:ces@iaees.org) and (or) [wjzhang@iaees.org](mailto:wjzhang@iaees.org). All manuscripts submitted to CES must be previously unpublished and may not be considered for publication elsewhere at any time during review period of this journal. In addition to free submissions from authors around the world, special issues are also accepted. The organizer of a special issue can collect submissions (yielded from a research project, a research group, etc.) on a specific topic, or submissions of a conference for publication of special issue.

## Articles

### **Tracking the impact of climate factors on vegetation dynamics across the Alashan Plateau semi desert ecoregion**

SeyedOmid Reza Shobairi, Samira Hemmati Roudbari, et al. 77-101

### **Dynamic analysis of a Leslie-Gower model with additive Allee effect on the prey population and predator harvesting including stochastic effect on each population**

K. Venkataiah, K. Ramesh 102-118

### **Structure comparison and evenness test of biological communities: Several platform-independent computational tools**

WenJun Zhang 119-136

### **Fractional order generalized Richards growth model with delay arguments on coupled networks**

Neriman Kartal 137-147

### **Woody species diversity, composition, and regeneration status across vegetation types and elevation gradients in Jorgo-Wato Natural Forest, West Wollega Zone, Ethiopia**

Takele W. Hika, Yohannes Sh. Daka, et al. 148-167
